

## Tour of JavaFX

```
java -jar Ensemble.jar
java -jar Mandelbrot.jar
java -jar Modena.jar
```

## Books

there aren't many

I just got one the other day JavaFX Essentials, Mohamed Taman, PACKT Publishing

can't make a recommendation, yet!

## Template

download zip file from Canvas

put in the following folders

Linux: ~/.IdeaC201x.y/config/projectTemplates folder

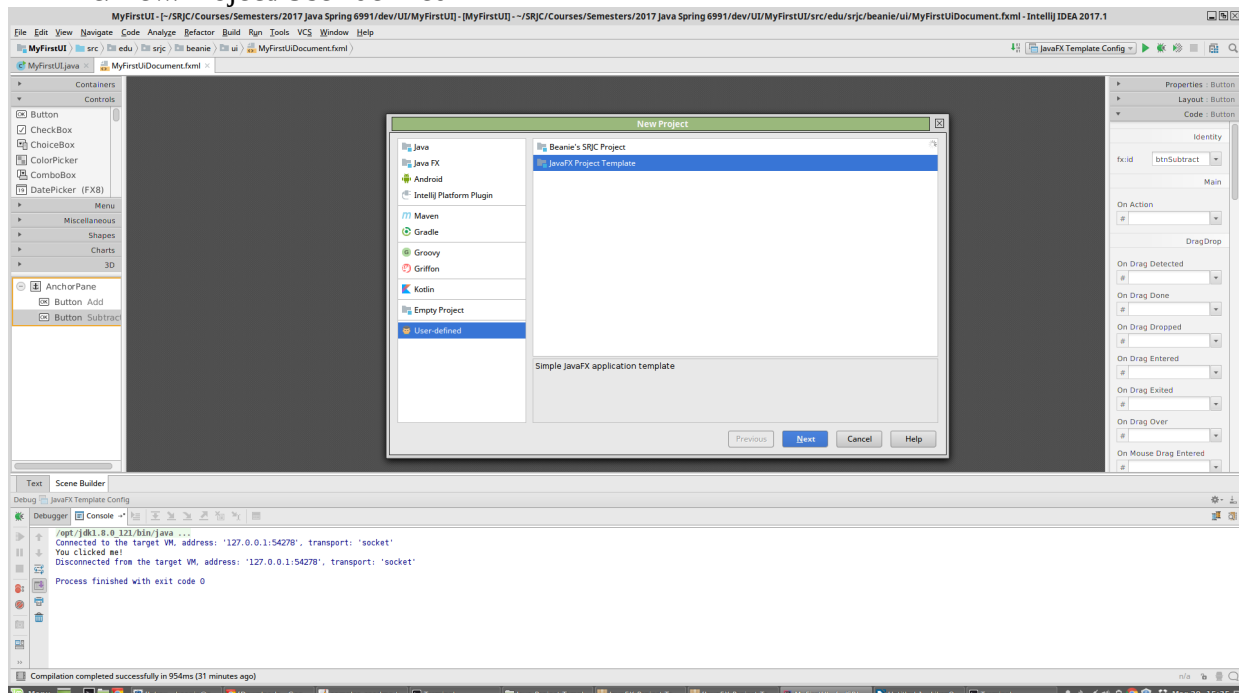

Mac: ~/.Library/Preferences/IntelliJ201x.y/projectTemplates

Windows: C:\Users\YOURUSERNAME\.IdeaIC201x.y\config\projectTemplates

You MAY have to create the projectTemplates folder yourself. It's CASE SENSITIVE on Linux and probably Mac as well.

## Creating a project from the template

### File/New/Project/User-defined

Fill out the new project wizard as you have been doing, name, location, and package. DO NOT TURN IN A UI ASSIGNMENT WITH MY PACKAGE NAMES.

You will need to RENAME all of the files to something that is relevant to your project. DO NOT TURN IN A UI ASSIGNMENT WITH THE DEFAULT FILE NAMES! You can do this by selecting the file, right-clicking, select **Refactor/Rename**.

## Tour of the Template

run it

explain it

Model-View-Controller pattern
